

# *Module 1 Weekly Challenge*

## **How many vessels can you fill with water this week?**

Want to make a huge impact on your preparedness without spending a lot of money? Store water using containers that you have on hand. Be creative in your search for vessels, and remember, they don't have to be food safe in order to store water for sanitation. (You'll need lots of that for flushing toilets, washing dishes, and personal hygiene.)

### **Dos and Don'ts**

- Do fill up canning jars that are sitting there, waiting empty on your shelf until you can something.
- Don't fill up plastic juice or milk containers with water you intend to drink (but these are fine for sanitation purposes.)
- Do fill up empty, clean 2-liter soda pop bottles.
- Do not store your bottles in places with extreme temperatures.
- Do rotate through your water supply just like you do any other preps.
- At the end of the week, figure out how many gallons of water you have stored away. We'll talk about this in the Facebook group.
